Your oil level sensor is located on the bottom of the oil pan, which means you will have to drain the oil in the engine to perform this work; therefore you might as well change the oil filter while you are performing this job to save you time and money in the long run. Over time, the coolant expansion tank tends to turn yellow with age, become brittle forming micro fractures and sometimes leak. When the car warms up, both the heat and pressure of the coolant starts to attack the weakest point of the tank, eventually causing it to fail and the car starts leaking coolant.
